Learning Objectives

The goal of this course is to provide various mathematical tools for analyzing the performance of communication systems and for optimally designing wireless communications systems.
Course Description (1)

- Performance Evaluation
  - Probability Distribution
  - Stochastic Process
    - Discrete Time Markov Chain
    - Birth and Death Process
    - Poisson Process
    - Point Process
  - Single Queue Systems:
    - M/M/1, variations of M/M/1, M/G/1
  - Queuing Networks
Course Description (2)

❖ Communication Scheme Design
  – Hidden Markov Model (HMM)
  – Markov Decision Process (MDP)
    – Partially observable MDP
  – Convex Optimization
  – Game Theory
Class Materials (1)

❖ Lecture Notes
❖ Reference

– Probability and Stochastic Process
  • Stochastic process (Author: Sheldon M. Ross)
  • Fundamentals of Queuing Theory
    (Author: D. Gross, C. M. Harris)
  • Markov Process for Stochastic Modeling
    (Author: Oliver C. Ibe)
Class Materials (2)

- Reference
  - Convex Optimization
    - Convex Optimization
      (Authors: Stephen Boyd and Lieven Vandenberghe)
  - Game Theory
    - Game Theory for Wireless Engineers
      (Authors: Allen MacKenzie and Luiz DaSilva)
Grading

- Quiz: 8 ~ 10회 (30 %)
- Midterm Exam. (30 %)
- Final Exam. (30 %)
- 태도 및 출석 (10 %)
- A (30%), B (50%), C 이하 (20%)
